Short Biography

I am a second-year Ph.D. student at MMLAB, **The University of Hong Kong**, advised by Professor Ping Luo. Additionally, I lead a research team focused on cooperative autonomous driving at the **Joint Research Center of Baidu and Tsinghua University**, collaborating closely with Professor Zaiqing Nie. Previously, I worked as a computer vision researcher for autonomous driving at **SenseTime Research**. My research encompasses 3D Perception, Motion Forecasting, End-to-End Autonomous Driving, V2X, and Efficient AI. Moreover, I led the development and release of several datasets for autonomous driving, including the pioneering real-world V2X dataset DAIR-V2X. Furthermore, I played a key role in establishing a deep learning model compression and deployment platform for autonomous driving research and mass production.
Now, my research interests focus on developing Generative AI for autonomous driving and embodied AI.
